Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 23 May 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### DETAILED ACTION

1. Claims 4-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 3. See MPEP § 608.01(n). Accordingly, the claims 4-16 are not been further treated on the merits.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language. A person shall be entitled to a patent unless –

3. Claim 17 is rejected under 35 U.S.C. 102(e) as being anticipated by **Honda et al** (6,608,938 B2).

As to claim 17, **Honda** discloses an image recording device comprising: recording a first image and a second image (figs. 2,3 (col.7, lines 34-44), determining a relative displacement between the first and the second image information (col.17, lines 3-6), generating the control information on the basis of the relative displacement (col.17, lines 10-17), characterized in that determination of motion vectors by means of an image compression and generation of control information the basis of motion vector (col.16, lines 33-42, col.17, lines 1-17).

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, are rejected under 35 U.S.C. 103(a) as being unpatentable over **Honda et al** (6,608,938 B2).

3. As to claims 1-3, **Honda et al** (hereinafter **Honda**) discloses an image compression device including a recording unit (figs.6, 7 (601), (701)) for serially recording an image information, an image evaluation unit (fig.5, fig.6 (100)) for evaluating the recorded image information and determining control information (col.2, lines 42-56,66- col.3, lines 5), a display unit (figs. 12-14 (1204,1303,1402)) for displaying the selection information in which the image evaluation unit determined the control information from a relative displacement of the serially recorded image information (col.5, lines 28-42), characterized in that the image evaluation unit ( fig.6 (100)) has an image compression device for generating motion vectors, wherein the control information is a main motion vector of the serially recorded image information (col.3, lines 10-16,col.4, lines 42-44). **Honda** did not expressly detailed having a data processing unit. However, it would have

been obvious to one skilled in the art to recognize that the device of **Honda** has to have a data processing unit in order to process the control information.

4. As to claim 2, **Honda** discloses that the selected information in a displayed image is a selection position and a selection field (see, figs.2, 3).

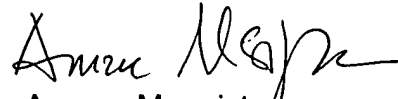

5. As to claim 3, **Honda** also teach that the control information has an X component, wherein the image evaluation unit essentially takes into account a parallel relative displacement of the image information in the X direction (see, figs.2, 3, col.7, lines 34-44,66 – col.8, lines 16).
